

**Project Description**

The City of Bismarck is preparing a Stormwater Master Plan for three Hay Creek subwatersheds located on the north side of the City of Bismarck (see figure). The intent of the Stormwater Master Plan is to provide the City with a guide for regional stormwater management infrastructure needs as development occurs within the watershed. The final report will include an evaluation of the proposed land use, major roadways, regional stormwater facilities, and proposed open space.

**Process and Schedule**

To develop the Master Plan, the City has retained Advanced Engineering and Environmental Services, Inc. (AE2S). AE2S has begun the process of developing the Master Plan and will incorporate previous land use and transportation studies into the final Stormwater Master Plan. The process for development includes data gathering, hydrologic and hydraulic modeling, concept evaluation, and development of a Master Plan report. The overall schedule, along with key events, is presented in the table below.

Schedule	Event
September 27, 2012	Public Informational Meeting
December 2012	Presentation of Draft Master Plan
January 2013	Presentation of Final Master Plan
